This project provided additional capacity for the growing demands of the Marygold Mutual Water Company. The new reservoir replaced the existing old water tanks located onsite at 9725 Alder Avenue, Bloomington, CA.

Steven Andrew Engineering as the District Engineer for Marygold Mutual Water Company prepared construction drawing and specifications for the construction of a new 2.0 million gallon welded steel reservoir adjacent to their headquarters.

The improvements included a 108-foot diameter welded steel tank 30 feet tall, concrete ring wall footing design, knuckle roof design, 18-inch diameter onsite piping, electrical and site lighting. Civil site work was prepared by Civil Works Engineers, Inc. SAE also provide construction management and engineering services during bidding and construction of the project.
