This project provided additional capacity for the growing demands of the Marygold Mutual Water Company. The new reservoir provided additional storage needed to serve the new Kaiser Permanente-Fontana Medical Center located at 9961 Sierra Ave, Fontana, CA.

Steven Andrew Engineering as the District Engineer for Marygold Mutual Water Company prepared construction drawing and specifications for the construction of a second 2.0 million gallon welded steel reservoir constructed on the same site as their existing Reservoir No. 1 that SAE previously designed.

The improvements included a 108-foot diameter welded steel tank 30 feet tall, concrete ring wall footing design, knuckle roof design, 18-inch diameter onsite piping, electrical and site lighting. Civil site work was prepared by Marshal Engineering Group, Inc. SAE also provide construction management and engineering services during bidding and construction of the project.
