This project replaced an old 14-inch steel pipe that was built outside of street right of way under existing homes and business that had reached its useful life.

Steven Andrews Engineering prepared construction drawings and specifications for the installation of 3,200 feet of 16-inch concrete mortar lined and coated ductile iron pipe with polyethylene encasement water transmission main placed within existing street right of way. The alignment started at the intersection of Atlantic Avenue and continued East to the intersection of Wilcox Avenue.

The project included inline valves, airvac's, blow off's, thrust blocks, concrete bus pad replacement, pavement replacement and traffic control per the City of Bell standards.
