Steven Andrews Engineering was retained by KFM Engineering to design a dual sewer siphon that was part of a grade separation project for the Puente Hills Intermodal Facility for the County Sanitation District No. 2 of Los Angeles County. The project is located in the City of Puente Hills, CA.

Steven Andrews Engineering prepared construction plans and specifications for the design of a dual 15” VCP sewer siphon that included the design of a new 60” diameter sewer manhole at each end of the siphon within street right of way on Workman Mill Road in the City of Puente Hills. The design included coordination with the design of a 48” welded steel water main relocation and new access road with grade separation.
